MULTIMEDIA UNIVERSITY

SUPPLEMENTARY EXAMINATION

TRIMESTER 1, 2015/2016 SESSION

TWS 2551 – WEB SERVICES

(All sections / Groups)

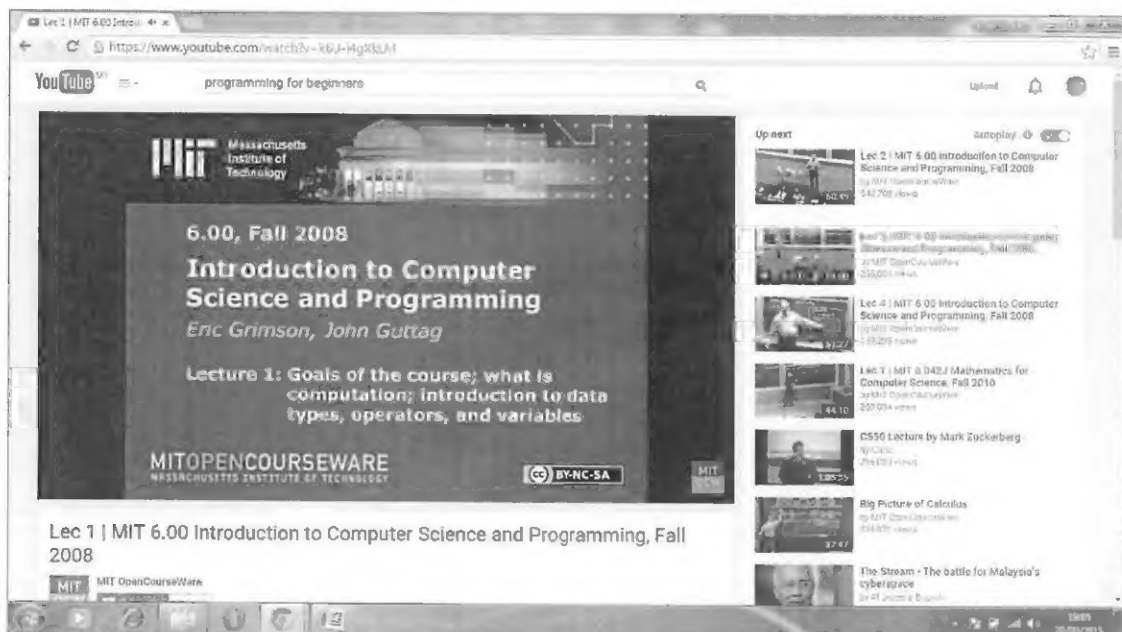

**19 NOV 2015
2.30 PM – 4.30 PM
(2 HOURS)**

INSTRUCTIONS TO STUDENTS

1. This question paper consists of 5 pages only.
 2. Attempt 4 out of the 5 questions. All questions carry equal marks and the distribution of the marks for each question is given.
 3. Please write your answers in the Answer Booklet provided.
-

Question 1

- How can we design an e-commerce website as a Web Service? Explain your answer based on Service-oriented Architecture (SOA). [4 marks]
- Which technologies that are considered optional in Web Service? Which component in the SOA is considered optional? Justify your answer? [2 marks]
- Why namespace is important in XML? How does namespace works? What does the URI contains? [4 marks]

Question 2

Consider the above website.

- Write a suitable DTD that defines the structure of the website. [4 marks]
- Write an XML Schema that is equivalent to the DTD in Question 2(a). [4 marks]
- Write an XML document that conforms to the structure defines in Question 2(a). [2 marks]

Continued.....

Question 3

- a) Explain the basic idea about Web Service and how XML is used in Web Service.

[2 marks]

- b) Consider the following XML document

```
<AAA>
  <BBB bb = "1">
    <CCC>Omar </CCC>
    <CCC>male </CCC>
    <CCC>c13 </CCC>
  </BBB>
  <BBB bb = "2">
    <CCC>Aisyah </CCC>
    <CCC>female </CCC>
    <CCC>c23 </CCC>
  </BBB>
  <BBB bb = "3">
    <CCC>Ali </CCC>
    <CCC>male </CCC>
    <CCC>c33 </CCC>
  </BBB>
</AAA>
```

and the following HTML output from a transformation.

```
male
female
male
```

Write the XSLT code for the above transformation. You have to use for-each loop to iterate the elements.

[6 marks]

- c) Why do we need to transform XML document into a new XML document or other forms? Please state two reasons.

[2 marks]

Continued.....

Question 4

```
[WebMethod]
public long Fib(int n)
{
    if (n == 0 || n == 1)
        return n;
    return Fib(k - 2) + Fib(k - 1);
}
```

```
[WebMethod]
public Hardware GetAnything()
{
    Computer computer = new Computer();

    return computer;
}
public class Hardware
{
    public string name;
    public string driver;
    private string id;
    public string version;
}
```

Consider the above C# code.

- a) Write the SOAP request for the above Web Methods. [4 marks]
- b) Write the SOAP response for the above Web Methods. [4 marks]
- c) List down four (4) fault codes that are used in SOAP fault and explain each of them. [2 marks]

Continued.....

Question 5

a) Consider the following WSDL code.

```

<?xml version="1.0"?>
<wsc:types>
  <xs:schema elementFormDefault="qualified" targetNamespace="http://ws.cdyne.com/ProfanityWS/Profanity.asmx">
    <xs:element name="SimpleProfanityFilter">
      <xs:complexType>
        <xs:sequence>
          <xs:element minOccurs="0" maxOccurs="1" name="Text" type="xs:string"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
    <xs:element name="SimpleProfanityFilterResponse">
      <xs:complexType>
        <xs:sequence>
          <xs:element minOccurs="1" maxOccurs="1" name="SimpleProfanityFilterResult" type="tns:FilterReturn"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
    <xs:complexType name="FilterReturn">
      <xs:sequence>
        <xs:element minOccurs="1" maxOccurs="1" name="FoundProfanity" type="xs:boolean"/>
        <xs:element minOccurs="1" maxOccurs="1" name="ProfanityCount" type="xs:int"/>
        <xs:element minOccurs="0" maxOccurs="1" name="CleanText" type="xs:string"/>
      </xs:sequence>
    </xs:complexType>
    <xs:element name="ProfanityFilter">
      <xs:complexType>
        <xs:sequence>
          <xs:element minOccurs="0" maxOccurs="1" name="Text" type="xs:string"/>
          <xs:element minOccurs="1" maxOccurs="1" name="LevelToClean" type="xs:int"/>
          <xs:element minOccurs="1" maxOccurs="1" name="UseNumberFilter" type="xs:boolean"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
    <xs:element name="ProfanityFilterResponse">
      <xs:complexType>
        <xs:sequence>
          <xs:element minOccurs="1" maxOccurs="1" name="ProfanityFilterResult" type="tns:FilterReturn"/>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:schema>
</wsc:types>

```

Consume all the functions available from the service. The parameter values should be obtained from textboxes and the result should be displayed on a label. The class name for the service is 'Filter' and the reference name is 'abc'. [5 marks]

b) Consider the following WSDL code.

```

<?xml version="1.0"?>
<wsc:service name="Profanity">
  <wsc:documentation xmlns:wsc="http://schemas.xmlsoap.org/wsdl/">
    CDYNE Profanity Filter web service is a simple, but elegant way to remove words that are
    applications. Basic Profanity Filtering can be accomplished by utilizing the <b>SimpleProc
    href="http://wiki.cdyne.com/wiki/index.php?title=Profanity_Filter">wiki</a> for details c
  </wsc:documentation>
  <wsc:port name="ProfanitySoap" binding="tns:ProfanitySoap">
    <soap:address location="http://wsf.cdyne.com/ProfanityWS/Profanity.asmx"/>
  </wsc:port>
  <wsc:port name="ProfanitySoap12" binding="tns:ProfanitySoap12">
    <soap12:address location="http://wsf.cdyne.com/ProfanityWS/Profanity.asmx"/>
  </wsc:port>
  <wsc:port name="ProfanityHttpGet" binding="tns:ProfanityHttpGet">
    <http:address location="http://wsf.cdyne.com/ProfanityWS/Profanity.asmx"/>
  </wsc:port>
  <wsc:port name="ProfanityHttpPost" binding="tns:ProfanityHttpPost">
    <http:address location="http://wsf.cdyne.com/ProfanityWS/Profanity.asmx"/>
  </wsc:port>
</wsc:service>

```

Continued.....

What is the class name of the service? Where does the service located? Why does the WSDL contains four port name? [3 marks]

c) Why UDDI is not popular anymore? [2 marks]

End of page.
